

# Broadband Networks

Our team provides comprehensive solutions for the complete project life cycle.

## Project Management Made Simple

- Fiber network design and engineering services
- Fiber optic construction management
- Funding support
- Grant development support
- Cost Modeling
- Inspection
- Punch list administration
- Technical specifications
- Network monetization
- Utility administration
- Franchise agreements
- And much more!

## Inventory Mapping

- Our Inventory programs utilize primary and secondary research to identify communications assets, towers, current providers, and other data!
- We utilize outside plant engineers to conduct physical examinations to identify assets in the field!
- We take all of the data and GIS map the infrastructure for easy visualization.
- You know exactly where infrastructure is and *is not* down to the address level.
- Now your buildout can be targeted!

## BAAT (Broadband Availability and Adoption Tool) Evaluation

- Learn what the roadblocks are for broadband adoption and availability in a specific area through our customizable community feedback service.
- Identify the personal aspects of Broadband in your community. The uses of Broadband, availability, reliability, performance experiences, impacts on lifestyle, education, and healthcare.
- All of this information helps you understand the true landscape and needs of your potential customers.
